Ornithonyssus bursa (Berlese, 1888) (Acari: Macronyssidae) can parasitize humans in the absence of their food source.

Gamasidosis:
- dermalitis human provoked by mites of birds

Lack of dermoscopy features to aid in the differentiation of dermatitis.

Attention to nests close to residences

Information contributes to accurate diagnosis and appropriate treatment.

Fevani et al., Case report: parasitism of Ornithonyssus bursa (Macronyssidae) in humans in the Taquari River Valley region, southern Brazil
