Investigación y Educación en Enfermería -Research and Education in Nursing - (ISSN_p: 0120-5307, ISSN_e:2216-0280), is an official publication of the Faculty of Nursing of the University of Antioquia (Colombia, South America). This journal disseminates the knowledge related to research and education that contributes to the development of the discipline of nursing.

Investigación y Educación en Enfermería is a three issues per year publication that receives unpublished articles in Spanish, Portuguese, and English languages. Submitting and tracking the articles will be an on-line process in the web page <http://www.udea.edu.co/iee>. After receiving the article it is submitted to peer-review, they recommend its acceptance or rejection through an arbitration system developed by national and international experts. Finally, the Editorial Committee based on the journal's general criteria, the academic value of the article and the arbitrator's opinion is the one in charge of accept or reject the publication of the submitted article. All manuscripts accepted for publication will be translated in English.

Investigación y Educación en Enfermería reserves the right to make editorial revisions designed to achieve greater clarity and conciseness. The texts and graphic material included in the publication material are exclusive responsibility of the authors and not necessarily reflect the thought of the Editorial Committee. *Investigación y Educación en Enfermería* reserves all legal rights of reproduction. This journal is adhering to the recommendations of COPE (Committee on Publication Ethics) about the best practice on publication ethics.

REPRODUCTION OF DOCUMENTS • REPRODUCCIÓN DE DOCUMENTOS • REPRODUÇÃO DE DOCUMENTOS

Partial or total reproduction of published articles in the journal *Investigación y Educación en Enfermería* is allowed when the source is cited.

Download the free full text in PDF format in: www.udea.edu.co/iee or request them to revistaiee@gmail.com

Type of articles received for publication

Original article. It is a document that presents in detail research original results. The structure has four sections: Introduction, methodology, results and discussion. A maximum of 25 references is allowed.

Review article. It is a document resulting from of a research where research results belonging to the science or technology field are analyzed and integrated in order to account for the development trends and progress. It is characterized by a careful literature review of at least 60 references cited in the text body.

Essay. It is a composition that presents research results from an analytical interpretative or critical point of view about a specific topic using original sources. A maximum of 25 references is allowed.

Case report (Nursing situations). It is a manuscript that presents the results of a study about a particular nursing situation in order to let readers know about the experiences and decisions made on such a situation. A maximum of 10 references is allowed.

Perspective article not derived from a research. It is a manuscript which is not the product or result of a research but presents its results from an analytical interpretative or critical point of view about a specific topic using original sources. A maximum of 25 references is allowed.

Letters to the editor. Critical analytical or interpretative views about articles published in the Journal, which in the opinion of the Editorial Committee is an important contribution to the discussion of the subject by the reference scientific community.

Editorial. It is a document written by the editor, an editorial committee member or a guest researcher about principles in the thematic domain of the journal.

Requirement for submitting your articles

Transfer of rights letter: Each item will be accompanied by a letter from the authors stating that such material is unpublished and that it will not be submitted to any other publication means before knowing the journal decision. The authors will be required to attach their

curriculum vitae and a signed statement indicating that if the article is accepted for publication all copyright will be exclusive property of *Investigación y Educación en Enfermería* journal.

Instructions for the article: The manuscript should not exceed 20 letter-sized pages, double-spaced with no additional spaces between paragraphs and titles, "Times New Roman" typeface size 12. The right, left upper and lower margins should be 3 cm.

Specifications on how the article sections should be submitted

Front page. It is of vital importance to provide a title to the paper on the first page; the title should be concise descriptive and limited to 80 characters. It should also contain the list of authors with their full names according to the order in which they appear in the rights transfer letter. This information should be complemented with the highest graduate degree; the department and institutional affiliation of each author. In addition the author(s) e-mail address to which correspondence should be addressed should be provided.

Abstract. Provide an abstract in the original language and in English of no more than 250 words each. For original researches it should consist of four paragraphs, labeled Background, Methods, Results, and Conclusions. For review, perspective, nursing situations and translation articles, the summary should include: Background, Synopsis of Contents and Conclusions, being limited to 200 words.

At all times, the authors should provide three to six keywords that best identify the subject. Descriptors in Health Sciences (DeCS), the Virtual Library in Health from the BIREME project of the World Health Organization and the Pan-American Health Organization can be consulted at: <http://decs.bvs.br/E/homepagee.htm> where keywords in Spanish, English and Portuguese can be found.

Information about sunventions and grants. If the manuscript is derived from a research, the name of the latter should be included. In addition, it should

be included any information about support or grants received by institutions or groups of any kind that fund the research on which the manuscript is based.

Conflict of interest. Authors of research articles should disclose any financial arrangement they may have with a company whose product is pertinent to the submitted manuscript. The Journal assumes the existence of a conflict of this nature when there is a financial relation or other circumstances that could interfere with the fair judgment or conduct of the authors.

Sections of original articles

A summary of general guidelines for the submission of these articles is presented below.

Introduction. The authors should state in this paragraph the purpose of the study and summarize their rationale, citing related references.

Methods. This section should explain in detail the process of selection of the people or phenomena studied, as well as the location, time and studied population. The necessary information about design, procedures, measurement tools and analysis methods used. Statistical methods unusual in researching should be described in detail. Additional information that could be of special interest can be attached. When applicable, ethical standards followed by the investigators should be described briefly in observational studies as well as intervention studies. Articles about research done on human beings should have the approval of the pertinent Ethics Committee, and so should be stated in the manuscript. *Ethical aspects:* the articles on human research must be approved by the ethics committee concerned, detailing how informed consent was obtained; copies of both documents should be sent. Randomized Controlled clinical trials should report the trial registration code.

Results. Results should be presented in a logical sequence, along with their tables and graphs which will be commented on in the most relevant findings within the text.

Discussion. In this section the authors emphasize the most important aspects of the study, and are compared with the results of other similar researches. Discussion about situations not supported by findings should be avoided. Limitations of the study should be pointed out and their potential repercussions on the interpretations of results should be discussed. In the last paragraph of this section should be written one or more conclusions derived from the results or the study.

Tables and graphs. These collect information in a summarized manner and present it most efficiently. These also allow information to be shown with the desired level of detail and precision. The inclusion of data in tables and graphs, instead of in the text, usually allows for reducing the extension of the latter.

Tables and graphs should be numbered sequentially, in the same order in which they are cited for the first time within the text. Each one should be accompanied by a brief title. Tables sometimes contain explanations that have to be included in footnotes following the next symbols, with the same presented order: *, †, ‡, §, ||, ¶, **, ††, ‡‡.

Authors should use abbreviated units according to the instructions dictated by the International System of Measurements as can be consulted at: <http://physics.nist.gov/cuu/Units/index.html>

Abbreviations. Only common abbreviations should be used. The authors should avoid using abbreviations in the title of the article. The first time an abbreviation appears in the text it should be preceded by the complete term to which it refers to, except in the case of common measurement units.

Reference presentation requirements. The bibliographic references should be placed in the text with the corresponding number and order of appearance as a super index. The references section will be submitted on separate pages of the text; they will be numbered consecutively according to the citation order of documentary material.

Investigación y Educación en Enfermería follows the general considerations about bibliographic references of the International Committee of Medical Journal Editors (Vancouver Uniform Requirements) which are adapted from the proposals developed by the National Library of Medicine in the United States. The authors who desire to get additional information about the instructions can consult the web page www.nlm.nih.gov/bsd/uniform_requirements.html format and different types of bibliographic references.

The Journal names shown in the reference section should be abbreviated according to the style used by the Index Medicus which is available in the NLM web site: <http://www.ncbi.nlm.nih.gov/journals>. For Spanish and Latin American journals that are not found in the first one, the Health Sciences Scientific Magazine in the health virtual library web site: <http://portal.revistas.bvs.br> is available.

Below some examples of the reference documents and material presentation are shown:

Journal articles. Article authors last name Two initials. Article title. International abbreviation of the journal's name. Year; Volume (number): article's initial- final page. Note: When there are more than six authors after the sixth author the Word *et al* must be written.

Books and other monographs. Author's last name two initials. Title. Edition number. City of publication: Editorial; year of publication. Page cited.

Book chapter. Author's last name two initials. Chapter title. In: book's director/coordinator/editor/compiler's. Book's title. Edition. Place of publication: Editorial; year. Article's initial-final page.

Congress, seminar or symposium memories. Presentation Author's last name two initials. Name of the presentation. In: Congress, seminar, symposium title, Place where it took place; date. City of publication: editorial; year of publication.

Electronic documents. For on line documents the accessed date is registered preceded by the word access between square brackets. Example: [accessed March 30th of 2010]

Internet magazine article. Article authors last name two initials. Article's title. Abbreviated journal name [Internet]. Year month [Date accessed]; volume (number): [pages if they appear]. Website.

Internet monograph. Authors Last name Two initials Directors/Coordinators/Editors. Title [Internet]. Edition. Place of publication: Editorial; year [Date accessed]. Website address. Example:

Audiovisual material. Authors Last name Two initials. Title [CD-ROM, DVD, Disquette, as appropriate]. Edition. Place: Editorial; year.

Legal documents. Law title/decreet/order. Official Bulletin name, number, (Date of publication).

Doctorate and Master thesis. Authors Last name Two initials. Thesis title [Master or doctorate thesis]. Place of publication: Editorial; year. Pages. Example:

Unpublished material. Applies to the articles already accepted but not published yet. The authors must request a journal certificate where they notify their acceptance. The format is: Authors Last name Two initials. Article title. International abbreviation of the journal title. Forthcoming year.
