

**Table 1. General data of surveyed patients (n = 200)**

| Variable   | n = 200        |
|--|----------------|
| Age in years — m (IQR)                                 | 37 (29.2-45.0) |
| Male — n (%)   | 108 (54.0)     |
| Female— n (%)  | 79 (39.5)      |
| Transgender — n (%)                                    | 13 (6.5)       |
| Time of evolution from diagnosis (in months) — m (IQR) | 78 (30-126)    |
| From Salta capital — n (%)                             | 165 (82.5)     |
| From inner Salta — n (%)                               | 35 (17.5)      |

**Table 2. Characteristics of PLHIV depending on whether or not they disclose their diagnosis in dental care**

|   | Disclose the diagnosis |           | p         |
|---|------------------------|-----------|-----------|
|   | Yes                    | No        |           |
| From the capital (n = 165) – n (%)          | 93 (56.3)              | 72 (43.7) | < 0.001 * |
| From inner Salta (n = 35) – n (%)           | 8 (22.9)               | 27 (77.1) |           |
| Transgender (n = 13) – n (%)                | 6 (46.15)              | 7 (53.85) | 0.08 *    |
| Non-transgender (n = 187) – n (%)           | 95 (50.8)              | 92 (49.2) |           |
| Time of evolution (months) – X (SD)         | 96 (68.0)              | 82 (67.0) | 0.14 **   |
| Age (years) – X (SD)                        | 38.8 (11.1)            | 38 (11.6) | 0.62 **   |
| Public sector (n = 119) – n (%)             | 68 (57.1)              | 51 (42.9) | 0.03 *    |
| Private sector (n = 81) – n (%)             | 33 (40.7)              | 48 (59.3) |           |
| Prefers general center (n = 113) – n (%)    | 51 (44.2)              | 62 (54.8) | 0.06 *    |
| Prefers specialized center (n = 87) – n (%) | 50 (57.5)              | 37 (42.5) |           |
